Orchestrating the Workspace
and Maximizing profitability

JAN | 2026

V. 03

We are a global technology company that operates NDD Orbix, a high availability platform for automation and management of digital environments (Workplace as a Service). We offer continuous monitoring of multiple devices and services, ensuring availability, security, cost reduction and alignment with ESG practices.

25,000+

End customers using our platforms in 43 countries, 28 of which are in EMEA & APJ

650+

Talented colleagues ensuring innovation, technological evolution and support

500+

Partners operating globally with NDD solutions

\$ 25 Million+

In 2025 NDD sold more than 25 million \$ of software as a service (Saas)

ESQ

As a purpose in the portfolio of solutions ensuring governance and sustainability

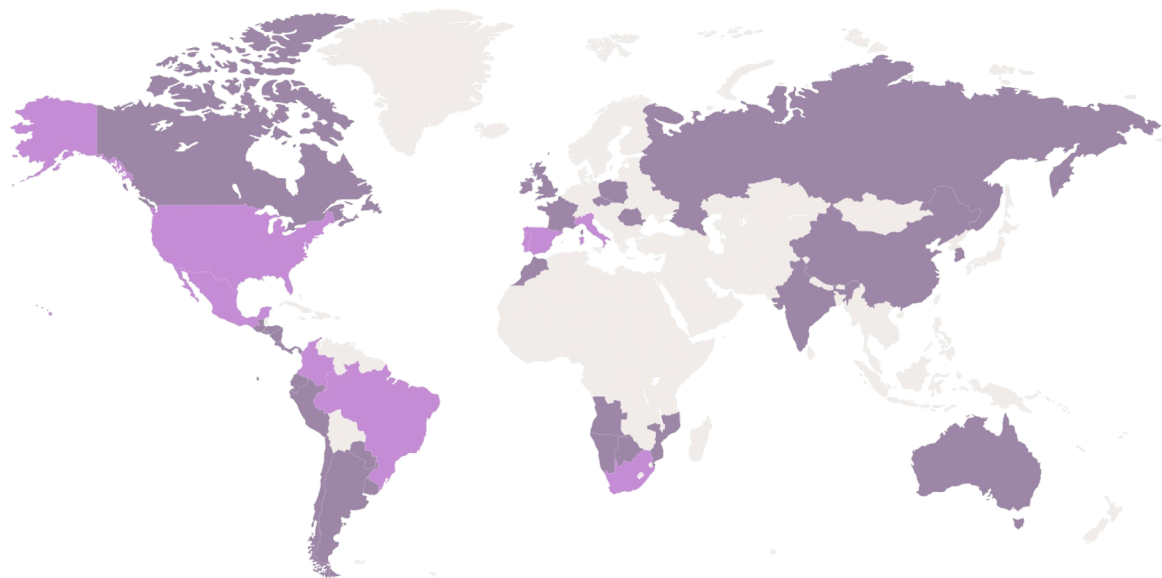

1.6 million

Trees planted for carbon offsetting through our Green Carbon sustainability project.

NDD created a platform to help overcome these challenges

NDD Orbix is a high available platform, SaaS and cloud enabled, aimed at manufacturers, integrators and print service providers, Workspace and Workplace as a Service. It monitors and manages multiple devices and services transforming data into strategic insights to increase productivity, reliability and intelligent operations; reducing costs and enhancing revenues.

NDD Orbix Platform Differentiators

The best device fleet management solution in the market!

LOWER DISCONNECTION RATE

Lowest disconnection rate on the market, ensuring continuous monitoring of devices .

This ensures total control while others solutions yet present disconnections of up to 30%. Everything that using **Unique AGENT** .

PRINT GOVERNANCE AND ACCESS CONTROL

Strict governance over who can print and where, ensuring permissions align with company security and usage policies.

INCREASED PROFITABILITY

20% savings on consumables without compromising quality. In addition to managing devices, the platform enables the management of the services that these devices perform, increasing efficiency and optimizing resources.

REDUCES IMPLEMENTATION COSTS

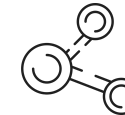

Remote and fast installation of print queues, ensuring drivers are always up-to-date and secure. This speeds up operations and reduces the need for manual maintenance, especially in environments with a large number of devices.

MONITORING AND SECURITY

The platform also monitors usage patterns and behaviors, providing a strategic view of the device fleet. For desktops and laptops, it includes real-time geolocation, software and hardware inventory, and vulnerability monitoring.

INCREASE IN SALES

The Platform's suite of solutions enables suppliers to expand their business with customers by offering additional security and cost control options, such as security policies, print quotas and robust printing infrastructure with Pull Printing.

ELIMINATION OF FALSE ALERTS

Our intelligence eliminates false alerts regarding consumption, toner and other supplies, reducing unnecessary shipments and optimizing resource replenishment.

SUPPORT FOR USB AND MULTI-DEVICE DEVICES

We are the only multi-brand platform on the market with a guarantee to manage USB and other devices, being the choice of manufacturers for projects involving these types of equipment.

OPTIMIZATION IN THE USE OF CONSUMABLES AND SUSTAINABILITY

We maximize the use of consumables by combining end-of-life alerts with load and production, which reduces waste by up to 20%. The platform also monitors environmental impact indicators, contributing to ESG practices.

The Power of NDD Print Management

Multivendor Support

Resellers that work with different manufacturers need to offer customer a single user experience across different platforms.

Accounting Accuracy

Accounting directly from the devices and not from the spooler makes NDD the most accurate technology in the market.

Easy Deployment

It is possible to pre-install NDD in the lab. One unique Agent for Monitoring and Pull Print.

USB Monitoring

Possible to monitor USB connected devices. Easily track all your connected devices in a single platform.

Less Infrastructure

Pull Print without Print Servers and Pull Print without Server (light version) are available to save high infrastructure costs.

High Redundancy

Best technology available in the market for managing redundancy, cache in memory

Unique Architecture

Flexible architecture that can be installed in a local, hybrid or cloud environment.

Mobility

Email Print, Releaser Web, QR Code & Mobile app (IOS, Android)

Digital Workflows

Personalized workflows with capture of metadata on the screen and OCR. Integrations with DMS/ERP/CRM solutions.

NDD EcoPrint

Uniquely control and reduce toner consumption

Track the results obtained through **custom dashboards and reports**

EcoPrint creates savings in **four layers**.

1. Lower toner consumption per page
2. Fewer cartridge replacements
3. Lower logistics costs
4. Better contract margins

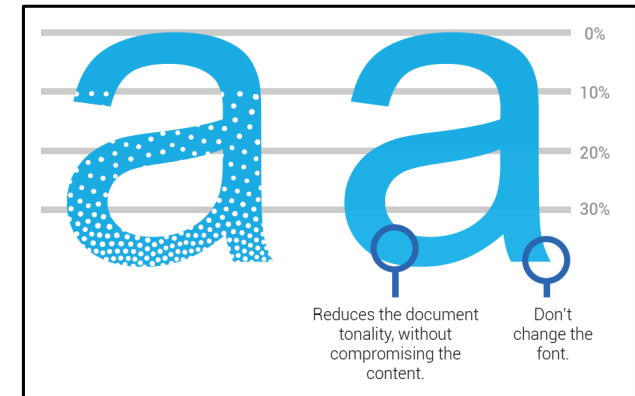

Track how **many pages were printed** using the software

Check the **printer that performs best** with NDD EcoPrint

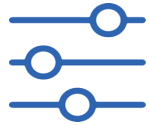

This technology reduces the tonality of printed pages, in configurable levels, **starting at 1% and being adjustable up to 60%.**

NDD EcoPrint

Uniquely control and reduce toner consumption

Easy configuration: allows you to remotely manage any number of printers, simultaneously.

Toner supplies: recognize the brands that had the most savings in supplies and reduce your costs even more.

Data history: track all customers who have EcoPrint installed and prove the optimization of toner supplies before and after using EcoPrint.

All manufacturers: technology that works on any printer, with the PCL6 driver.

Security

Data center

NDD complies with the most diverse data security standards.

NDD Orbix benefits from Microsoft Azure's extensive portfolio of security compliance certifications, ensuring that all data processing and storage practices meet the highest industry standards. This ensures security at every stage, from design to implementation and management of the infrastructure that supports our solutions. It uses Microsoft Azure data centers, which are renowned for their certifications and storage quality. The Azure environment complies with European Union data protection regulations.

Hardware Usage and Network Security

Interactions with our NDD Print MPS software are done via secure HTTP with TLS. The primary domain is authenticated by a Verisign certificate. No shared servers are used.

Data encryption

Hard drives and backups are encrypted and can only be restored with keys stored off-site, preventing data loss.

Calculating a conservative ROI

1. Engineer Productivity & Remote Support

Orbix will assist with queue issues, driver deployment, remote remediation and proactive monitoring.

4. Consumables optimization

Orbix ensures fewer premature shipments, reduced stock buffers, better replenishment timings and fewer emergency deliveries.

7. SMB Expansion

With lower onboarding costs, lower support costs per customer, SMB accounts will be to be served much more profitably.

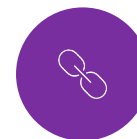

2. Reduced truck trips

By having a more accurate consumable management, proactive issue detection we will reduce supply related dispatches.

5. EcoPrint savings

With lower toner consumption per page, fewer cartridge replacements and better contract margins we generate significant annual savings.

6. USB device monetization

Unmanaged USB devices lead to no meter collection, no consumables visibility and no proactive service. With Orbix this will be monetized.

3. Disconnection rate reduction

By avoiding missing meter reads, billing leakage, failed replenishments, SLA breaches and manual troubleshooting we can save operational leakages.

Calculation example for a 100,000 MIF

1. € 450,000
2. € 900,000
3. € 375,000
4. € 750,000
5. € 500,000
6. € 288,000
7. € 400,000

Total conservative savings at a 100k MIF:

€ 3,663,000
